

Data Protection Bingo

We comply with GDPR	But xxxxxxxx does it	it's OK the data is in the EU	Its already in use	Citizens
The ICO said it in guidance	Your data is important to us	Do we need that policy?	Why should we consult with individuals?	How do we avoid a fine?
What is a cookie?	But Data Protection says “No”	Do I have to pay the ICO a fee?	It's only a one-off marketing email	It's a great app
How would anyone else identify them?	It's only business data	Why do they want their personal data?	Is this really a breach?	Who is the ICO?
We're using Google Docs / Microsoft. They back up our files, don't they?	We told them we'd send them a newsletter	I don't understand it all	What is ransomware?	We use an 8 character password
